

# Deadbolt Tool for Adams Rite

## LKM273

This Tool (LKM273) was designed to release the actuator on most Adams Rite MS1850S Hook style bolts and Deadbolts with a backset of 7/8" - 1 1/2".

Simply slide the tool between the bolt and housing, with the hook part up. The objective is to slide under and come down, hooking onto the Actuator guide pin, simulating the same motion as the Cam would make on the back of the mortise cylinder. By pulling down on the tool after it is hooked, the actuator is moved and the Bolt is unlocked.

Just that simple!

Some tips to make the job easier:

- Use an Air Wedge between the door and frame to create a wider gap to work in.
- Once the Actuator has been moved, a screwdriver can be used to drop the bolt or hook out of the way, once travel towards the unlocked position has been started.
- You may have to slightly pull or push on the door to take pressure **OFF** of the bolt.
