

COMBINATION LOCK DIAL COVER INSTALLATION GUIDE

Spin Resistant/Dust Proof
WPC1020D

***This cover
is NOT
waterproof!***

This cover is being shipped with the adhesive gasket affixed to the cover bottom. The black plastic spacer (WPC1020C001) is secured to the adhesive gasket to ensure proper positioning.

Important Notice: Do not remove black plastic spacer during installation. If cover is installed too close to the lock, you will not be able to open cover lid.

To Install: Peel off adhesive cover backing. Position closure tab of the cover to the left or right, depending on handing of the door. Press firmly on all four sides and corners.

Do not locate cover closure tab under the lock. This could inhibit your view of the top reading dial.

You may permanently attach the cover directly on to the door by using #8-32 screws (do not over tighten).

You cannot, however, permanently attach the cover using screws directly on to drill resistant or non-drill resistant hardplate covers for auxiliary deadbolts.
